Women in Battle (Kvinner i kamp. 150 års kamp for frihet, likhet og søsterskap)

Graphic Non-Fiction | Cappelen Damm | 2018 | 128 pages

150 years ago, women and men led very different lives. Women could not vote or make their own money. They had no control over their own bodies.

A woman's father would make her decisions until she was married. Then her husband would take over.

This changed when women began to organize. In this book writer Marta Breen and illustrator Jenny Jordahl tells the story about the women's movements many dramatic battles.

Green Stuff (Grønne greier)

Non-Fiction | Ena Forlag | 2018 | 168 pages

Green Stuff introduces environmental issues in a fresh and accessible way.

The book is a collection of comic strips about climate and the environment.

The strips have since 2016 been on the back of Norway's largest newspaper's edition for kids (Aftenposten junior). Teachers feed back that they use the materials for ages ranging from 7 to 16.

Googolplex (Googolplex. Verdens største tall)

Picture Book | Gyldendal | 2017 | 44 pages

Googolplex is an unusual book: a book for reading aloud about small and large numbers, especially about quite incredibly, incomprehensible, enormous, huge numbers. And that means also about the infinite, incomprehensibly large universe.

By using recognisable situations from everyday life, and taking small, concrete numbers and sizes as its point of departure, the book helps build up the child's growing understanding of numbers. How large can numbers actually be? Is infinite a number? And is Googolplex the very, very biggest number in the world?

Illustrated by Rune Markhus.

Plastic Waste in the Sea (Søppelplasten i havet)

Non-Fiction | Cappelen Damm | 2016 | 56 pages

People first started making plastic out of oil in a large amount in 1950. Paper and apple cores break up quickly in the sea, but plastic doesn't. We're producing more and more plastic every year. Researchers think that there are around 100 million tons of plastic floating around in the sea. This waste, which respects no national borders, is carried away by the ocean currents and distributed over the whole of the earth. In thirty years, there will be more plastic than fish in the sea if we carry on dumping at the same rate as we are now.

What can we do? The polluters are the ones who have responsibility for what they are dumping in the sea. The politicians must pass laws and regulations in their own countries and work with other countries to clean up the ocean. But we can also do a lot where we live. Researchers are working to find ways to collect up all the millions of tons that are floating out at sea. And it's urgent!

Jørn Hurum

Ida (Ida)

Non-Fiction | Cappelen Damm | 2012 | 72 pages

47 million years ago there lived an ape-like little creature in a jungle in Germany. Today she is best known to the world as the fossil Ida. In this wonderful, illustrated picture book we learn how she lived and how we know what we do about her today.

When paleontologist Jørn Hurum introduced Ida to the world's media in 2009, she became a scientific sensation. Ida is our very own 47 million year old ancestor, and this picture book written by Jørn Hurum and Torstein Helleve from the Natural History Museum and illustrated by Esther van Hulsen brings Ida to life once again.

The reader is taken on a journey to the jungle that Ida lived in as part of a stunningly illustrated tale of her life, where we follow her through dangers and triumphs. In addition to a fictionalised picture book section based on what we know about Ida and the time that she lived, the book also includes a fact and activity section.
