

Åsmund H. Eikenes

A Single Drop. The spectacular science of bodily fluids (Sprut. Sanninga om kroppsvæskene dine)

Popular Science | Samlaget | 2018 | 198 pages

Once you read this book, blood tests, kisses and glasses of milk will never be the same.

In *A Single Drop*, Åsmund H. Eikenes spurts out funny stories about blood, sweat and tears, and mixes them together with grand revelations about more than 50 vastly different bodily fluids. Through sensational stories and page-turning popular education, you will develop new insights into your bodily fluids. This is pop-science at its best. Get engrossed by the grossness of the fluids!

Long Litt Woon

Unexpected Dawn: A story about mushrooms and grief (Stien tilbake til livet. Om sopp og sorg)

Narrative Non-Fiction | Vigmostad og Bjørke | 2017 | 300 pages

This is a story about a journey that started abruptly when the author's life collapsed. In the midst of paralyzing grief, she stumbles upon the wondrous world of mushrooms. In the process, she befriends the Mushroom Pickers, a tribe with their own unspoken rules and rites of passage. As she sets out on a voyage of discovery into the realm of fungi, she ventures along a parallel journey through an inner landscape of pain and sorrow.

As Long takes the reader through this simultaneously funny and heartbreaking story, her unusual, personal quest soon feels familiar; at its underlying core the story is one of common human experience.

Bjørn Vassnes

The Kingdom of Frost (Frostens rike)

Popular science | Cappelen Damm | 2017 | 192 pages

The Cryosphere is the name of those parts of the earth that contain frozen water; like snow, ice, permafrost, glaciers - and something that very few has heard of: invisible glaciers. This is a part of the world that most of us only know from afar - with the exception of Norwegians and other Northerners. But we see less and less of it, as the area is shrinking.

Bjørn Vassnes, Norway's leading science journalist and native to the arctic plateau of Finnmarksvidda, take us on a fascinating journey through climate research, biology, cultural history and archaeology. Whether you live in it or not, *The Kingdom of Frost* effects all life on earth.

Jon Larsen

In Search of Stardust (Jakten på stjernestøvet)

Den gylne Banan | 2017 | 150 pages

Tiny pieces of space rock called micrometeorites are everywhere on Earth. *In Search of Stardust* is the first comprehensive popular science book about micrometeorites. It's also a photo documentary comprising more than 1,500 previously unpublished images: the first atlas of micrometeorites, hundreds of which are depicted here in high-resolution color microscopic photography and in scanning electron microscope imagery.

Thanks to Larsen's work, for the first time it is now possible for anyone to find these amazing tiny stones from space.

Hilde and Ylva Østby

Diving for Seahorses. A Book About Memory (Å dykke etter sjøhester)

Popular Science | Cappelen Damm | 2016 | 272 pages

Take a plunge into the science of memory, together with sisters Hilde and Ylva Østby. They explore the many facets of memory and how it influences our lives, both from a neuroscience perspective and through conversations with some of the most influential memory researchers of our time. *Diving for Seahorses* explains memory through personal and vivid tale telling, combining the best of two craftsmanships: Hilde is a novelist, and Ylva is a neuropsychologist.

Dag O. Hessen

C (C. En uautorisert biografi)

Popular Science | Cappelen Damm | 2015 | 256 pages

Most of the life processes within and around us involve carbon in one form or another. Carbon in pure form can be both graphite in a pencil, and diamond. It is also the starting point for most of the synthetic materials which pervade modern life. However, the essence of Dag O. Hessen's story is the lifecycle of carbon, the important balance between photosynthesis and cellular respiration, between building and burning. This book gives us the basis we need for that understanding. It is an informal, well-informed book written with strong personal commitment by one of Norway's best presenters of research and science.
