KEPLER62 is a new children's book series created by three popular names, one of them is Norwegian Bjørn Sortland.

The Earth's natural resources are running out, and the Global Government has decided to send a group of kids on a journey to investigate an Earth-like planet that might be capable of supporting life. In order to be eligible for the mission, kids have to complete all levels of a videogame called Kepler-62. The players are selected for a training camp and then the journey to the planet Kepler-62 can begin. But not everything is as it seems...

This six-part space adventure takes readers on an exciting journey through outer space. The young voyagers become settlers when they reach Kepler-62e, and they are faced with difficult choices. They encounter alien beings, illness and finally the truth behind the lies.

Savon sanomat

'Parvela and Sortland bring up many themes that add depth to their dystopia, while the book is still primarily an entertaining and fast-moving novel. (...) it also draws in the kinds of kids who tend not to enjoy books. (...) After all, who doesn't love a well-written adventure?'
